

All Areas of Koto City

What is evacuation areas?

When a large earthquake occurs, it is important to protect ourselves from secondary disasters such as spreading fires that can potentially cost the lives of large numbers of people. The evacuation areas are designed to be places where people can take refuge temporarily. The Tokyo Metropolitan has designated 12 evacuation areas in Koto City.

What is fire-safe areas?

This refers to areas where large urban fires do not tend to occur. The Tokyo Metropolitan designates these areas as spots where residents are able to evacuate to a safe place within a short distance (about one block) even if a fire occurs, and where evacuations over long distances are not required.

Note: "Fire-safe areas" simply means people need not travel long distances to evacuate; in some cases, however, residents will need to take refuge in nearby open spaces.

This leaflet uses different colors to indicate points that people should note, depending on the situation.

Keep Your Preparations Up to Date on an Ongoing Basis

(1) Participate in training

If you haven't taken steps to prepare for a disaster before it occurs, it is virtually impossible to respond appropriately. In order to be able to take the appropriate steps during times of disaster and minimize damage, it is important to participate in training on a regular basis.

Prepare emergency supplies to carry with you

Gather together any emergency supplies you would

require in case you need to evacuate, and put these into a backpack or similar bag so that you can leave with these supplies at any time.

To avoid fires and other secondary disasters, secure

take steps to keep kerosene stoves from toppling, install earthquake-sensitive circuit breakers, etc. Hold a family meeting

There is nothing more unsettling than the idea of family

members being separated during a disaster. Hold a

of buildings collapsing or tilting due to earthquakes. It takes caused by spreading of earthquake-induced fires. The into consideration the characteristics of the ground in the assessment is a combination of the likelihood of fire starting in the area (possibility of greater shaking/vibration, liquefaction), area (presence of numerous flammable structures and characteristics of area buildings (structure and age), and vulnerability to shaking) plus the likelihood of spreading fire

Building collapse risk is assessed by evaluating the danger Fire risk is assessed by identifying the possibility of damage

prone to fire outbreaks, there remains the risk of fire spreading

Prepare for 5 times per day

6 Hygienic products

sanitizing wipes, etc.

Masks, sanitary goods, diapers,

from other areas. This risk is also added into the equation.

Fire Risk

In Koto City, a total of 155 districts are covered under the survey. The figure below metropolitan earthquake disaster prevention regulations. Published most recently in indicates risk levels for these three categories, assigning ranks in the range of one September 2022, this is the ninth time the survey has been conducted. Overall risk (low risk) to five (high risk) for each of the districts. These are highlighted with different colors for easier viewing. Get a sense of the risk level in the area where you live and remember this risk in your day-to-day preparations.

In addition to building collapse risk and fire risk, disaster relief initiative difficulty coefficient (degree of difficulty in evacuation, firefighting, rescue, and other disaster response activities due to road conditions, etc.) is added in to create a single index. It is hoped that this index will (density and structure of buildings). Even if the location itself is not be useful in helping residents to consider how to address earthquakes and prepare for them.

> Note the importance of preparing supplies ahead of time in case of disaster. See the list of supplies shown on the left, and prepare emergency supplies on a daily basis so that they can be taken out at any time. In addition, to ensure that the

supplies will be useable when you need them, inspect them

about twice a year, noting expiration dates.

Daily Stockpiling

It is essential to have the food and daily necessities at home. The key to stockpiling is to always purchase a little more of what you usually use.

In terms of amount, anticipate and plan for damage to lifeand supply lines by stockpiling a minimum of three days' worth. In addition to this, keep in mind that even as distribution gradually recovers, it is not certain that you will be able to obtain what you need immediately. For this reason, it

is a good idea to stockpile enough for one week or more.

Daily Stockpiling (regular replacement of emergency supplies) Buy a little more than you need

Always have a reserve on hand

I Plan Evacuating in the **Event of Large-scale** Flooding

Where large-scale flooding is forecast, a call for evacuation will be broadcast over the municipal disaster prevention radio system or similar system by the Koto City Office or the fire

If you hear an evacuation announcement, promptly evacuate to public facilities or temporary evacuation centers indicated by Koto City. In such event, it is important to evacuate to higher floors. If your home is safe, it is advisable to remain (shelter-in-place) in principle.

Temporary evacuation centers

In Koto City, as a strategy to address large-scale flooding caused by flooding of the Arakawa River, tsunami, etc., Koto City has agreements with specified corporations to provide temporary centers.

Disaster Emergency Message Dial System

The Disaster Emergency Message Dial system is a special service operated during times of disaster, including earthquakes, at which time people may have difficulty getting through on the telephone due to extremely high call volume. This recorded message system can be used to communicate with family and friends regarding the safety of individuals, where to meet, etc. Koto City residents can practice using the system on the dates noted below. Try it out so that you know how to use it in the instance of disaster. (Refer to the following dates available to practice using the service)

1 7 1 ► 1 ► (XXX) XXX - XXXX • Record

Dial landline numbers (including area code) of the resident(s) of the disaster area.

If you do not wish other than specified individuals to hear your message, use a passcode to record and play messages. To use this system, you must decide on a passcode ahead of time. Speak with your family ahead of time and decide on passcodes.

How to record Dial your four-digit passcode 171 ▶ 3 ▶ ※※※※ ▶ (×××)×× − ×××× Record
Dial landline numbers (including area code) of resident(s) of the disaster area.
How to play Dial your four-digit passcode 171 ► 4 ► ※ ※ ※ ► (×××) ××× − ××× × ► Play message

Dates available practice using the service

- 1st and 15th of every month Disaster Prevention and Volunteer Week (January 15th-January 21st)
- First three days of the year (January 1st–3rd)

Disaster Prevention Week (August 30th–September 5th)

Evacuating from High-rise

In the event of an earthquake, it is possible to evacuate to shelters set up at elementary and junior high schools. If your home or apartment building was built to meet earthquake resistance and seismic isolation standards, then "shelter-in-place" (remain in your own home) is the first choice if the structure is safe after an earthquake.

Residential Buildings

If you are able to remain in your own home, and you live in a condominium or residential complex, please take the following actions. It is especially important that you work with disaster relief teams.

Protect yourself, put out fires, and secure your own safety and that of your family

Meet at the temporary meeting place determined ahead of time at your apartment complex, etc Check on fires and damage incurred by buildings In general, residents should stay If fires have broken out or

in their homes if their residence is significant damage has occurred, sound enough to continue living in residents should move to designated evacuation centers. and no fires have broken out. Check on safety of occupants of individual homes and collect information

Do disaster relief teams keep a list of individuals who need assistance evacuating?

Yes Disaster relief teams visit the homes of people on the list, confirming their safety and/or assisting them to evacuate in accordance with individualized plans. Disaster relief teams visit the homes of people on the list from designated evacuation centers, confirming their safety and/or assisting them to evacuate in accordance with individualized plans.

Points of caution for taking shelter in one's home

Information and commodities provided by Koto City and others are delivered to designated evacuation centers. Note that supplies will not be distributed at

accepted at evacuation centers. If you decide to take shelter in your home, please help out evacuation centers by gathering information and commodities as a contribution to the local community.

Some residents of residential complexes may be

checking on the safety of people in the area at an early stage; (2) Provide emergency medical services; (3) Distribute food, water, and daily commodities to people taking shelter in their homes; and (4) Act as a hub for regional information-gathering. Please use this map to find your nearest evacuation center as well as the nearest designated evacuation center. * Evacuation centers accept individuals whose homes have been damaged or are in danger of

being damaged. Following a large earthquake, emergency risk evaluations will be conducted on

buildings. Please resume living in your home only after a specialist has inspected it for safety.

Shirakawa Area Ondicates designated evacuation centers

Evacuation centers are set up by the City for residents unable to live in their homes

following a disaster such as an earthquake. Such centers are opened at municipal

elementary schools, junior high schools, high schools, public facilities, and private

facilities, depending on the size of the disaster, Municipal elementary and junior high

school, which are opened first, are considered designated evacuation centers. In addition

to taking evacuees, they also function as follows: (1) Provide primary services such as
